

Electronic Flow Rate Transmitter

EVS 3100

for Oils / Viscous Fluids

Description:

The flow rate transmitters in the series EVS 3100 (aluminium range) are specially designed for use in hydraulic and other fluid technology systems. They operate according to the turbine principle, i.e. the speed of an impeller turning in the fluid flow is measured and converted into a 4 .. 20 mA analogue signal.

Two further G1/4 threaded holes in the turbine housing provide connections for additional units, e.g. temperature and pressure transmitters.

Special features:

- Pressure resistant to 400 bar (depending on model)
- Viscosities of 1 .. 100 cSt
- Output signal 4 .. 20 mA
- Additional connection of temperature and / or pressure transmitters possible
